UCHIDA AIR JOGGER
AJ-700

Perfect jogging Performed
Quickly with the Air Blower

Jogging time is significantly reduced by the effect of the air blower. Wet ink on printed papers is quickly dried by the air, thus preventing staining of the paper by the ink. See the effect and improvement in productivity compared with conventional joggers.

When A3 / Ledger size tray is used.

When A4 / Letter size tray is used.

UCHIDA AIR JOGGER
AJ-700

Features

### Neat jogging rapidly achieved with the powerful air blower

Thanks to the high-power air blower, which is the most powerful in its class, the AJ-700 reliably jogs unevenly arranged papers very quickly. It prevents the paper from becoming soiled by blowing air between the sheets.

Ideal Paper Handling

Ideal paper handling is possible with the AJ-700 before loading into a printer or collator so that the paper feed error such as empty and double feeding are thereby improved.

### Quick Drying of Ink and Elimination of Static

Wet ink can be rapidly dried by the effect of the air, which is even more effective in the case of two-sided printing. It is also effective for elimination of static electricity and powder stayed on the paper after printing.

Angle of jogger tray is adjustable according to paper quality.

Various Job Modes

Jogging strength and air volume are adjustable according to paper quantity and quality. In addition, the AJ-700 can operate in various modes such as air only, jogger only,reset timer operation and the time interval difference mode(continuous jogging for a preset period after the air has stopped).

Continuous jogging   Jogger volume   Air volume

Foot operation   (Operation panel)   Timer
